

SARAN KUMAR VALLAMSETTI

Data Engineer – Microsoft SQL Server, Python, MongoDB, Snowflake ,SSIS, SSRS, Power BI

Professional Summary:

- Results-driven **Data Engineer** with strong expertise in relational and non-relational databases, including **Microsoft SQL Server, PostgreSQL**, and **MongoDB**, delivering scalable, high-performance data solutions aligned with business objectives.
- Strong hands-on expertise in **SQL development, query optimization, stored procedures, functions, indexing, partitioning**, execution plan analysis, and transaction management to ensure optimal database performance and reliability.
- Proven experience in designing, developing, and optimizing end-to-end **ETL pipelines** using **SSIS**, and delivering enterprise-grade reporting and analytics solutions through **SSRS** and **Power BI** with a strong focus on data accuracy and performance.
- Highly skilled in transforming complex datasets into actionable business insights using **interactive dashboards, dynamic visualizations**, and data storytelling techniques to support strategic decision-making.
- Experienced in building data-driven applications using **Python** and MongoDB drivers, including single-page and multi-page applications, with in-depth knowledge of **MongoDB aggregation pipelines** and fault-tolerant data architectures.
- Adept at cloud deployment of data solutions and working in **Agile/Scrum** environments, effectively translating business requirements into scalable, high-quality technical implementations.
- Strong background in end-to-end **software lifecycle management**, including requirements gathering, solution design, development, testing, deployment, release documentation, and post-production support to ensure system stability and reliability.
- Demonstrated **leadership experience** in mentoring and guiding small teams, providing technical direction, removing delivery blockers, and fostering collaboration to ensure timely and high-quality project outcomes.

Technical Skills:

- **Programming Languages:** Python.
- **SQL & Databases:** Microsoft SQL Server, Postgres SQL, MongoDB, Azure Data Studio.
- **ETL Tools:** SSIS (SQL Server Integration Services), Azure Data Factory
- **Data Lakes & Storage** – Amazon S3, Azure Data Lake Gen2 Storage, Google Cloud Storage
- **Data Warehousing & Analytics** – Snowflake, Azure Synapse Analytics
- **Reporting:** SSRS (SQL Server Reporting Services), Power BI.
- **Version Control:** Git.
- **Others:** SSMS ,VS Code, Jupiter Notebook, MongoDB Compass, MongoDB Atlas and Stitch.

Professional Experience:

ENDAVA SOLUTIONS INDIA PRIVATE LIMITED
DATA ENGINEER (SENIOR TECHNICIAN)

JAN 2026 – PRESENT

GALAXE SOLUTIONS INDIA PRIVATE LIMITED
DATA ENGINEER (TECHNICIAN)

JAN 2025 – DEC 2025

GALAXE SOLUTIONS INDIA PRIVATE LIMITED
ASSOCIATE DEVELOPER

AUG 2023 – DEC 2024

Project Details:

GXCAPTURE™

MAR 2024 – DEC 2026

GxCapture is a highly **configurable, low-code**, web-based client intent capture platform designed to automate and streamline the direct capture of user intent across multiple lines of business. The platform enables organizations to dynamically configure workflows, control types, inbound/outbound call handling, business rules, user access permissions, and data mappings using a flexible key-value configuration model.

It enables rapid onboarding of new business use cases with minimal development effort, ensuring scalability and adaptability across enterprise environments. It offers comprehensive capabilities including advanced data processing, configurable workflow orchestration, audit and compliance tracking, dynamic reporting, structured data archival, and streamlined CI/CD-driven deployment pipelines. The product is internally adopted by **multiple enterprise clients**.

Key capabilities of GxCapture:

- ✓ Swift Intakes via automated load, manual entry, system extracts, copying existing intents.
- ✓ Rules-driven guided intent capture enabling responsive real time validation.
- ✓ Built-in Approval workflow
- ✓ User Roles provisioning and Access management

Key Contributions in GxCapture:

- ✓ Configured and enhanced GxCapture™ to manage the end-to-end technology refresh lifecycle, including plan loading, asset mapping, risk categorization, and role-based workflow execution.
- ✓ Optimized complex SQL queries, stored procedures, and ETL pipelines to support asset tracking, audit trails, compliance reporting, and high-performance workflow processing.
- ✓ Implemented robust Change Data Capture (CDC) to ensure accurate audit tracking, historical data maintenance, and regulatory compliance.
- ✓ Automated reporting, reminder notifications, and executive dashboards, reducing manual operational effort by 80% while improving system resilience and visibility.

Client – 1: Bluejay

MAR 2024 – JULY 2024

Deployed GxCapture as a configurable intent capture engine to support pharmacy weight loss drug programs focusing on copay and coinsurance workflows.

Roles & Responsibilities:

- Designed and developed a **complete database module** for pharmacy weight loss drugs copay and coinsurance processing.
- Built stored procedures, functions and optimized data flow paths to enable plan configuration, Copay/coinsurance calculation, Member Eligibility Validation and processing in network and out of network plans.
- Created detailed unit test cases, traceability matrices, and validated data accuracy against business logic.
- Worked in Agile/Scrum model with sprint planning, backlog refinement, and retrospective meetings.

Maintained source code versioning using Git, managed release notes and documentation, and supported CI/CD deployments using Jenkins

Client – 2: Songbird

AUG 2024 – SEP 2024

The Songbird project implemented GalaxE's proprietary GxCapture solution to automate the benefits management process and establish a centralized source of truth for all benefits data. The initiative included gap analysis and comprehensive mapping of PBM vendor source system data to GxCapture, followed by automated data migration with QA/QC and certification processes to ensure accuracy, integrity, and alignment with business objectives.

Roles & Responsibilities:

- Designed scalable database enhancements to support:
 - Role-based access permissions
 - Configurable workflow engines
 - Data validation and rule execution

Implemented and evaluated efficient report generation **custom report generation** and loading of new plans.

The Fiserv Tech Refresh Program leveraged **GxCapture™ as the core product platform** to manage enterprise-wide technology modernization initiatives. The program proactively refreshed hardware, software, databases, operating systems, and infrastructure assets before end-of-life to mitigate operational and security risks. The program supported wave-based execution with remediation planning, risk management, and burndown reporting to track progress. Enabled role-based user **delegation**, refresh plan loading, and automated report generation for operational and executive visibility. Delivered a structured, scalable approach to technology lifecycle management across the organization.

Roles & Responsibilities:

- Optimized and managed **end-to-end data refresh processes** for enterprise technology assets, including software, hardware, databases, operating systems, and infrastructure, supporting the Tech Refresh Program.
- Tuned and enhanced complex SQL queries, stored procedures, and database objects to improve **performance** and reliability of core functionalities such as plan execution, asset tracking, and audit workflows.
- Change Data Capture (CDC) is implemented for **plan audit information** to accurately track data changes, ensure compliance, and maintain historical records.
- Designed and optimized **ETL pipelines** to support asset data ingestion, transformation, and validation, data **archival processes** and analytics.
- Developed **automated reports, reminder notifications** and enabled role-based user assignment to refresh plans to improve operational efficiency and risk management.

This automation **reduced manual operational overhead by 80%**, while improving data accuracy, consistency, and system resilience.

Educational Qualifications:

UNIVERSITY COLLEGE OF ENGINEERING – JNTU, NARASARAOPET

Bachelor of Technology (**BTech**) – 2023

Electrical, Electronics and Communications Engineering

Training & Certifications:

- **MongoDB:** The Complete Developers Guide – Udemy 2025.
- **Microsoft SQL Server:** SQL(Intermediate) – Hacker Rank 2024 .
- **PostgreSQL:** Introduction to Postgres SQL, Simpli Learn – 2024.
- **Python:** Python for both Academics and industry –Udemy 2023.
- **Snowflake:** The Complete Masterclass – Udemy 2026.
